SUMMARY

I am a Full Stack Developer with 2 years of experience creating AI-integrated web applications using modern technologies like React.js, Next.js, and Node.js. I have successfully built scalable systems which improve user interaction and performance. I am passionate about developing efficient and clean code and I am eager to take on new challenges in the tech industry

EDUCATION

Bachelor's in Computer Science
Iqra University
2021 – 2025

SKILLS

- React, Next.js
- JavaScript, Python, Node.js, Express.js
- MongoDB, Mongoose, MySQL(Basic)
- Bootstrap, TailwindCSS
- Hostinger, Vercel, Render, AWS(Basic)
- CI/CD Pipelines(Basics), Docker(Basic)
- Git, Github
- Unit Testing, Component Testing
- Agile Development

LANGUAGE

- English – Professional
- Urdu – Native

EXPERIENCE

Mern Stack Development

2025(Nov) – Present

Veclar Technologies | Bahria Town., Islamabad

Veclar Technologies – Real Estate Company specializing in property management and digital real estate solutions

- **Built 3+ scalable web applications** using MERN stack serving 1,000+ users
- Developed REST APIs handling real-time data with <200ms response time
- Implemented SSE (Server-Sent Events) reducing **polling overhead by 60%**
- Optimized MongoDB queries improving backend **response speed by 35%**

Full Stack Development

2025(Jan) – 2025(June)

Crafting Colons | Chack Shehzaad., Islamabad

A company focused on developing innovative web solutions

- Delivered 2 production-ready Next.js + MERN applications for clients
- Integrated AI chatbots using Gemini API and Botpress, **reducing support queries by 40%**
- Built real-time dashboards with live tracking, improving client reporting efficiency.

PROJECTS

Smart Dining Hub

A smart restaurant management system utilizing AI

- AI-powered restaurant system with real-time order tracking and automated menu suggestions
- **Reduced manual order errors by 50%** through real-time synchronization

Real Estate Platforms

A platform for listing and searching properties effectively

- Property listing system with **JWT** authentication, admin dashboard, and advanced search filters

Floor Detection System

A computer vision project focused on accurately detecting floors

- AI-based floor detection using **Segment Anything Model with 90%+ accuracy**

KEY ACHIEVEMENTS

Application Development:

- Successfully built and delivered scalable applications that improved user engagement and performance
